Basis for Conclusions on Exposure Draft

ED 9 JOINT ARRANGEMENTS

Comments to be received by 11 January 2008
This Basis for Conclusions accompanies the proposed International Financial Reporting Standard (IFRS) set out in ED 9 Joint Arrangements (see separate booklet). Comments on the draft IFRS and its accompanying documents should be submitted in writing so as to be received by 11 January 2008. Respondents are asked to send their comments electronically to the IASB Website (www.iasb.org), using the 'Open to Comment' page.

All responses will be put on the public record unless the respondent requests confidentiality. However, such requests will not normally be granted unless supported by good reason, such as commercial confidence.

The International Accounting Standards Board (IASB), the International Accounting Standards Committee Foundation (IASCF), the authors and the publishers do not accept responsibility for loss caused to any person who acts or refrains from acting in reliance on the material in this publication, whether such loss is caused by negligence or otherwise.

Basis for Conclusions on
ED 9 Joint Arrangements

This Basis for Conclusions accompanies, but is not part of, the draft IFRS.

Introduction

BC1 This Basis for Conclusions summarises the International Accounting Standards Board’s considerations in reaching the conclusions in ED 9 Joint Arrangements. Individual Board members gave greater weight to some factors than to others.

BC2 ED 9 results from the Board’s Short-term Convergence project. The project is being conducted jointly with the United States standard-setter, the Financial Accounting Standards Board (FASB). The project was added to the Board’s agenda to reduce differences between IFRSs and US generally accepted accounting principles (GAAP) that are capable of resolution in a relatively short time and can be addressed outside of major projects.

BC3 This part of the Short-term Convergence project relating to joint arrangements was undertaken by the Board. The proposals were not deliberated by the FASB. The objective of the project is to improve financial reporting for those activities within the scope of IAS 31 Interests in Joint Ventures. The proposals in the exposure draft are concerned principally with remedying two aspects of IAS 31 that the Board considers an impediment to high quality reporting of joint arrangements—namely, that the form of the arrangement is the primary determinant of the accounting and that an entity has a choice of accounting treatment for interests in jointly controlled entities.

BC4 The Board did not reconsider all of the requirements in IAS 31. For example, the Board did not reconsider the equity method, nor did it reconsider the scope exclusion for venture capital organisations, mutual funds, unit trusts and similar entities. Accordingly, this Basis for Conclusions does not discuss requirements of IAS 31 that the Board did not reconsider. When the Board develops its Basis for Conclusions on the IFRS arising from this exposure draft, it intends to include relevant paragraphs from the Basis for Conclusions on IAS 31.
The problems with IAS 31

BC5 The two main concerns that the Board is addressing in the exposure draft are to change from treating the form of the arrangement as the most significant factor in determining the accounting, and to eliminate the choice of accounting that IAS 31 offers.

BC6 Accounting for interests in joint arrangements in accordance with IAS 31 follows the form of an arrangement (i.e., the accounting can differ depending on whether a legal entity is established). The Board acknowledges that the form of an arrangement affects the rights and responsibilities of an entity. For example, an entity might transfer an asset that it owns into an entity that it controls with the effect that the owner has limited its liability in relation to that asset by using a legal structure. Equally, however, an owner could reverse the effects of that legal structure through guarantees or indemnities.

BC7 IAS 31 permits a choice of using the equity method or proportionate consolidation to account for interests in jointly controlled entities. The Board has indicated that it will exclude options of accounting treatment from accounting standards when possible. Such options can lead to similar transactions being accounted for in different ways and, therefore, impair comparability.

The problem

BC8 The accounting requirements of IAS 31 can lead to the recognition of assets that are not controlled and liabilities that are not obligations. When a party to an arrangement has joint control of an entity, it shares control of the activities of the entity. It does not, however, control each asset nor does it have a present obligation for each liability of the jointly controlled entity. Rather, each party has control over its investment in the entity. If the party uses proportionate consolidation to account for its interest in a jointly controlled entity, it recognises as assets and liabilities a proportion of items that it does not control or for which it has no obligation. These supposed assets and liabilities do not meet the definition of assets and liabilities in the Framework. The Framework (paragraph 49) defines an asset as ‘a resource controlled by the entity ...’ and a liability as ‘a present obligation of the entity ...’. Consequently, the amounts recognised are not a faithful representation of the entity’s assets and liabilities.
The Board concluded that proportionate consolidation is not an appropriate method of accounting for jointly controlled entities. Recognising a proportionate share of each asset and liability of an entity is not consistent with the Framework, which defines assets in terms of exclusive control and liabilities in terms of present obligations. It leads to the recognition of amounts that do not represent faithfully an entity's assets and liabilities. For example, it could lead to a venturer recognising cash balances that it does not have the ability to direct or deploy, and from which it cannot obtain benefit, without consultation with other parties. Proportionate consolidation might generate information similar to recognising contractual rights and obligations, but that is by coincidence rather than by design.

In addition, IAS 31 can lead to an entity not recognising its assets and liabilities. When a jointly controlled entity is similar in substance to jointly controlled operations or jointly controlled assets, a party controls assets and has obligations relating to the activities of the joint arrangement. These assets and liabilities should be recognised in the party's financial statements. However, if the party accounts for such jointly controlled entities using the equity method (because IAS 31 emphasises the form of the arrangement), the party does not recognise the assets that it controls and its liabilities.

Therefore, the Board also concluded that recognising a net interest in a joint arrangement (for example, when using the equity method) is not appropriate when the parties have contractual rights and obligations relating to individual assets and liabilities of the joint arrangement.

Some argue that proportionate consolidation is a practical way to present a venturer’s interest in a joint venture, particularly when the activities of the venture are an integral part of the venturer’s operations. Despite its conceptual flaws, their view is that proportionate consolidation better meets the information needs of users of financial statements by providing a better representation of the performance of an entity’s management and an improved basis for predicting future cash flows. The Board noted these arguments but concluded that the practical argument does not refute the fundamental inconsistency with the Framework. The Board believes that it is misleading for users of financial statements if an entity recognises as assets items that are not controlled, and as liabilities items that are not present obligations, and presents these together with items that it controls or items that are present obligations.
The Board’s view is that the enhanced disclosure requirements of the proposed IFRS would provide better information about the assets and liabilities of a joint venture than is provided by using proportionate consolidation. An entity presents, in its statement of financial position, a proportion of each asset and liability of jointly controlled entities when using proportionate consolidation. However, it is not possible to distinguish which assets the entity controls from those that the entity has the ability to direct and deploy only on agreement by other parties. The exposure draft proposes the disclosure of summarised financial information for all individually material joint ventures to help meet the needs of users of financial statements.

The Board also considered the views of some who point out that joint control and significant influence are different. They argue that it is inappropriate to account for an associate and a joint venture in the same way, using the equity method. Although the Board acknowledges that significant influence and joint control are different, the equity method has been used to account for joint ventures in jurisdictions around the world for many years. The consideration of the equity method, and any alternative to it, is outside the scope of this short-term project.

The proposals

The Board therefore proposes to eliminate proportionate consolidation. The Board proposes that a party to a joint arrangement should recognise its contractual rights and obligations arising from the arrangement. In meeting this principle, the descriptors of joint arrangements in IAS 31 require change so that the focus of the IFRS is not on the form of an arrangement.

The Board proposes to use ‘joint arrangement’, rather than ‘joint venture’, to describe joint activities subject to the requirements of the IFRS. The Board also proposes that ‘jointly controlled operations’ and ‘jointly controlled assets’ should be described as ‘joint operations’ and ‘joint assets’. The exposure draft retains ‘joint venture’ to describe joint arrangements that are subject to joint control and in which the parties have an interest only in a share of the outcome of the economic activities.

The proposed definition of a joint arrangement requires shared decision-making by all of the parties to the arrangement, rather than joint control. The Board is proposing this change because control is defined in IAS 27 Consolidated and Separate Financial Statements in the context of having power over financial and operating policies of an entity. This definition of control does not translate well to an asset or operation. Joint control is
retained for a joint venture. It is an appropriate description of arrangements in which there is a separate business or economic activity over which the parties to the arrangement share the power to govern the financial and operating policies of the arrangement. Venturers do not often establish financial and operating policies for a joint operation or joint asset arrangement.

**The loss of joint control**

BC18 The definition of an asset in the Framework requires an entity to control it—ˈan asset is a resource controlled by an entityˈ (paragraph 49). Therefore, an entity can recognise only assets that it controls. If an entity shares an asset, it recognises only those rights to the asset that it controls. Similarly, if an entity shares an obligation, it recognises only that portion of the obligation that it currently has.

**SIC-13 incorporated into the draft IFRS**

BC20 The Board has a policy of incorporating into an IFRS the consensus of any interpretation that is capable of incorporation within a single standard. Guidance on a topic is easier to find and use if it is located in one pronouncement. In accordance with this policy, the Board proposes to incorporate into the IFRS the consensus of SIC-13 *Jointly Controlled Entities—Non-Monetary Contributions by Venturers*.

BC21 The consensus of SIC-13 regarding non-monetary contributions made by a venturer to a joint venture is consistent with the requirements in paragraph 22 of IAS 28 *Investments in Associates* regarding upstream and downstream transactions with associates. The Board has incorporated the consensus of SIC-13 by referring to the requirements of IAS 28.
Disclosure

BC22 The Board understands that users of financial statements would find it useful to have information about the nature and extent of an entity’s operations conducted through joint arrangements. The Board, therefore, proposes to require an entity to disclose such information.

BC23 The Board also proposes to align the disclosures required by the IFRS regarding interests in joint ventures with the disclosure requirements in IAS 28 for investments in associates. Both associates and joint ventures are investments that an entity does not control but for which it has the power to influence strategic decisions. Both are recognised using the equity method and the additional disclosures proposed relate mainly to the application of the equity method. The Board’s view, therefore, is that the disclosure requirements of interests in joint ventures should be aligned with those required by IAS 28 for investments in associates in order to meet the needs of users of financial statements.

Assessment of net benefits

BC24 The proposals are intended to benefit financial reporting in three ways. First, an entity would be required to recognise only those assets that it controls and only those liabilities that are present obligations. Second, the removal of an optional accounting treatment would improve comparability. Third, the proposals would achieve convergence in principle with US GAAP, which generally requires the use of the equity method to account for jointly controlled entities. The Board believes that these benefits would exceed any costs of implementation.
